Set background | Clear frame

What the app does

Recommends meals

show % of calories in fats

show % of calories in Carbs

Tells you what food to stay away from

show % of calories in protein

display total calories eaten

Features

Can be accessible with all phones

Able to read any language on the label

Takes picture of the food label

Able to search a database of healthy food combinations

User can type the food out not just take a picture

Notificatins on how you are eating through the week

Price

Would be expensive to create and put out the app

Bi-Monthly based plan, $10 every other month

Future Growth

In addition to an app, there could be a service white it takes your specific dietary restrictions and plans out your meals and it sends you the ingredients

Hurdles

Some food labels are different than others so the app must be able to read all types of labels

Food Without Labels

Being able to take into account for allergies diabetes, exc

Advertisment

Use apps like tiktok and instagram to show the features and get the word out

pay influences to promote the app
